

1 turning it into fuel and energy and possibly
2 electricity and other components.

3 Q I think I understand the process. Is that a process
4 that Green Box is currently employing?

5 A **It--the first unit is up and running, yes.**

6 Q How--how is that an asset, the fact there is this
7 process? What--

8 A **In the Green Box process itself, to achieve 100 percent**
9 **reclamation, you have to do something with each element**
10 **of the post-consumer food contaminated waste that we**
11 **collect--Green Box collects.**

12 So this is one way to get rid of the plastics, the
13 straws, the syrup containers, the spoons, the forks,
14 everything that's coming from that post-consumer waste
15 stream.

16 And an easy way to define that is, think fast food
17 restaurants, or it could be arenas, concerts, movie
18 theaters, universities, schools with milk cartons or
19 other food contaminated waste materials. It currently
20 now all goes to the landfill.

21 Q I think I understand the process. I'm just still
22 curious about how--and maybe you don't know, but how
23 values were assigned to these various entries here as
24 far as what--what this patent and intellectual property
25 entry's worth?
